

The Author of this code can revise the program to resolve the following problems:

- In `OrderedLinkedList` class, the variable `tail` is not necessary. Everything can be implemented with just a `head`.
- In `KeyNode` class, the `previous` variable is not necessary. This linked-list can be defined as a single linked-list.
- In `KeyNode` class, another constructor with no argument can be implemented
- + The method `size()` is implemented very well.
- The method `add()` is not implemented
- The method `find()` is not implemented
- The method `get()` is not implemented
